Dayforce Enterprise Product Requirements Document (PRD)

Version: 1.2 | **Date:** Nov 5, 2026 | **Author:** Product Management (Enterprise QE)

Scope: *Core HR, Time & Attendance, Leave Management, and Gross-to-Net Payroll Verification*

1. Executive Summary & Product Overview

The Dayforce Platform delivers an unified enterprise Human Capital Management (HCM) solution. The system shall centralize employee records, automate punch pairing, track shift attendance, and orchestrate compliant gross-to-net payroll execution.

The system must maintain high data integrity across all employee status transitions and prevent unauthorized record access.

2. Employee Lifecycle Management

2.1 Onboarding and Profile Maintenance

The system shall record new employee hires with mandatory legal name, tax identification number, date of birth, and assigned work location.

The system must validate that employee email addresses are unique across the active organization directory.

The system shall enforce role-based permissions prohibiting non-administrative personnel from viewing unmasked tax identification numbers.

The system will support asynchronous employee document upload with virus scanning and automated audit logging.

3. Time and Attendance Tracking

3.1 Clock In and Clock Out Workflows

The system shall allow registered employees to record digital clock-in and clock-out punches via web portal and mobile clients.

The system must capture geolocation coordinates and server timestamps for every clock event.

The system shall enforce a 5-minute grace period before tagging an arrival as late relative to scheduled shift start time.

The system rejects duplicate punch events submitted within 60 seconds of a previous event to prevent accidental double-tap recording.

The system shall notify shift managers automatically when an employee fails to clock in within 15 minutes of shift start.

The system must maintain immutable historical audit logs of all manager punch adjustments and reason codes.

4. Overtime Calculation & FLSA Compliance

4.1 Regular and Overtime Hours Determination

The system shall calculate overtime at 1.5x regular pay after 40 hours worked in a single workweek.

The system must track non-exempt employee daily hours and flag daily shifts exceeding 12 hours for mandatory rest break review.

The system shall allow payroll administrators to configure jurisdiction-specific overtime thresholds at the legal entity level.

The system validates that calculated overtime hours match approved timesheet records before committing to payroll batch.

5. Leave Management & Accruals

5.1 Leave Eligibility and Approvals

The system shall enforce a mandatory 90-day probationary period before newly hired employees become eligible for paid annual leave accrual.

The system must allow employees to submit planned time-off requests with date ranges and leave type classifications.

The system shall route leave requests exceeding 3 consecutive days to department managers for formal approval.

The system prohibits negative leave balances unless explicit overdraft authorization is configured for the employee group.

The system will support automated bereavement, jury duty, and parental leave workflows according to statutory policies.

6. Payroll Calculation & Deductions

6.1 Gross-to-Net Engine

The system shall compute gross pay by aggregating regular hours, overtime hours, and approved premium differentials.

The system must apply statutory tax withholdings including federal, state, and social security deductions prior to net pay disbursement.

The system shall enforce cutoff deadlines for timesheet approvals prior to executing final payroll generation.

The system stores final pay statements in encrypted PDF format accessible through employee self-service.

7. Role-Based Security & Non-Functional Specifications

The system shall enforce multi-factor authentication for all users possessing HR Administrator or Payroll Administrator roles.

The system must encrypt all sensitive employee PII at rest using AES-256 and in transit using TLS 1.3.

The system shall maintain 99.9% platform availability during core business hours (06:00 to 22:00 local time).

The system will support concurrent attendance clock events up to 5,000 requests per minute with p95 latency under 500ms.
